

# MAE 6291

## Internet of Things for Engineers

---

Prof. Kartik Bulusu, MAE Dept.

Week 3 [02/04/2026]

- Setting up the Edge Lab
- IoT Architecture and Ecosystem
- Layers in IoT systems - 3 level layer model
- The Linux Terminal
- Blinking LEDs on using MQTT [Graded lab activity]

This course material incorporates both original content and supplementary visual aids:

- **Images with references:** Properly cited in slide captions, figure legends, or in-text attributions
- **Unreferenced images:** Sourced from Perplexity.io and used for illustrative purposes in an educational context
- **Fair use:** All materials are used in compliance with educational fair use guidelines

# The Linux Terminal

## Explore files and folders

| Command            | Description                                                                              |
|--------------------|------------------------------------------------------------------------------------------|
| pwd                | Show the <b>current</b> directory you are in                                             |
| ls                 | List files in the current directory; add -l or -a for more detail or to see hidden files |
| cd /path/goes/here | Change directory (for example cd /home/pi/Documents)                                     |
| mkdir myfolder     | Create a new directory named myfolder                                                    |
| cp file1 file2     | Copy a file; cp -r dir1 dir2 copies a whole directory                                    |
| mv old new         | Move or rename files/directories                                                         |
| rm file            | Delete a file; use rm -r folder carefully to remove a directory                          |

## Helpful navigation and history tips

| Command or Keyboard Entry | Description                                                        |
|---------------------------|--------------------------------------------------------------------|
| clear                     | Clear the terminal screen.                                         |
| history                   | Show a numbered list of past commands; run one again with !number. |
| Up/Down arrow keys        | Scroll through previously used commands to run or edit them.       |

## View and edit files

| Command       | Description                                                        |
|---------------|--------------------------------------------------------------------|
| nano file.txt | Open a simple text editor in the terminal to create or edit a file |
| less file.txt | View a long file one page at a time (use q to quit)                |
| cat file.txt  | Print the contents of a text file to the screen                    |

## System information and status

| Command     | Description                                                    |
|-------------|----------------------------------------------------------------|
| hostname -I | Show the Pi's IP address                                       |
| uname -a    | Show Linux kernel and system details                           |
| df -h       | Show disk space usage in human-readable form                   |
| free -h     | Show memory (RAM) usage                                        |
| uptime      | See how long the Pi has been running                           |
| top or htop | Monitor running processes and CPU usage (press q to exit top). |

# IP address of your RPi connected to the network using WiFi

ifconfig -a

```
pi@raspberrypi017: ~  
File Edit Tabs Help

OR

Some rules to observe:

- 10 minutes restriction
- Unlimited responses
- You can discuss with your colleagues in-class
- Watch real-time results and calibrate

## Two questions up for discussion

1. How should we start perceiving an IoT system, physically ?

2. How / Where do we place the “thing” in that system ?

### Keywords:

Small, functional, re-envisioning applications, efficient, sensor-driven, smart-sensors, connectivity, autonomy, data-driven, durability, fault tolerance, interoperability

Proximity to data, compute-power, network, distributed-network etc.

# Explore MQTT Basics

## Message Queuing Telemetry Transport

**Goal:** To understand how publishing and subscribing works practically

# MQTT paradigm

## Hardware

### Broker

- The broker is the server
- It distributes the information to the interested devices connected to the server.

### Client

- The device that connects to broker to send or receive information.

## Messaging

### Topic

- The name that the message is about.
- Clients publish, subscribe, or do both to a topic.

### Publish

- Clients that send information to the broker to distribute to interested clients based on the topic name.

### Subscribe

- Clients tell the broker which topic(s) they're interested in.

### QoS

- Quality of Service to the broker
- Integer value ranging from. 0-2.

# Eclipse Mosquitto - An open source MQTT broker

Eclipse Mosquitto provides a lightweight server implementation of the MQTT protocol that is suitable for all situations from full power machines to embedded and low power machines.

Sensors and actuators, which are often the sources and destinations of MQTT messages, can be very small and lacking in power. This also applies to the embedded machines to which they are connected, which is where Mosquitto could be run.

# Step-1: Eclipse Mosquitto - An open source MQTT broker

**sudo** apt-get update

**sudo** apt-get upgrade

**sudo** apt install mosquitto

```
pi@raspberrypi: ~  
File Edit Tabs Help  
pi@raspberrypi:~ $ sudo apt install mosquitto
```

```
pi@raspberrypi: ~  
File Edit Tabs Help  
pi@raspberrypi:~ $ sudo apt install mosquitto

    RX packets 868 bytes 857162 (837.0 KiB)
```

`hostname -I`

# this is also OK to use

## Step-4: Enable Remote Access to Mosquitto Broker (No Authentication)

**sudo** nano /etc/mosquitto/mosquitto.conf

```
pi@raspberrypi: ~
GNU nano 5.4 /etc/mosquitto/mosquitto.conf *
# Place your local configuration in /etc/mosquitto/conf.d/
#
# A full description of the configuration file is at
# /usr/share/doc/mosquitto/examples/mosquitto.conf.example

pid_file /run/mosquitto/mosquitto.pid

persistence true
persistence_location /var/lib/mosquitto/

log_dest file /var/log/mosquitto/mosquitto.log

include_dir /etc/mosquitto/conf.d
listener 1883
allow_anonymous true

^G Help      ^O Write Out ^W Where Is  ^K Cut       ^T Execute   ^C Location
^X Exit      ^R Read File ^\ Replace   ^U Paste     ^J Justify   ^_ Go To Line
```

**sudo** systemctl restart mosquitto

**sudo** systemctl status mosquitto

## Step-4: Publishing “Hello World!” Message to *testTopic* Topic

### # Install mosquitto-clients

**sudo** apt install -y mosquitto mosquitto-clients

### # Open a terminal window and type the following:

mosquitto\_sub -d -t testTopic

```
pi@raspberrypi: ~
pi@raspberrypi:~ $ mosquitto_sub -d -t testTopic
Client (null) sending CONNECT
Client (null) received CONNACK (0)
Client (null) sending SUBSCRIBE (Mid: 1, Topic: testTopic, QoS: 0, Options: 0x00)
Client (null) received SUBACK
Subscribed (mid: 1): 0
```

mosquitto\_sub -v -t '#' -h <IP address>

mosquitto\_pub -d -t testTopic -m "Hello world!"

```
pi@raspberrypi: ~
pi@raspberrypi:~ $ mosquitto_sub -d -t testTopic
Client mosqsub/919-raspberrypi sending CONNECT
Client mosqsub/919-raspberrypi received CONNACK
Client mosqsub/919-raspberrypi sending SUBSCRIBE (Mid: 1, Topic: testTopic, QoS: 0)
Client mosqsub/919-raspberrypi received SUBACK
Subscribed (mid: 1): 0
Client mosqsub/919-raspberrypi received PUBLISH (d0, q0, r0, m0, 'testTopic', ... (12 bytes))
Hello world!
Client mosqsub/919-raspberrypi received PUBLISH (d0, q0, r0, m0, 'testTopic', ... (12 bytes))
Hello world!
```

```
pi@raspberrypi: ~
pi@raspberrypi:~ $ mosquitto_pub -d -t testTopic -m "Hello world!"
Client mosqpub/920-raspberrypi sending CONNECT
Client mosqpub/920-raspberrypi received CONNACK
Client mosqpub/920-raspberrypi sending PUBLISH (d0, q0, r0, m1, 'testTopic', ... (12 bytes))
Client mosqpub/920-raspberrypi sending DISCONNECT
pi@raspberrypi:~ $ mosquitto_pub -d -t testTopic -m "Hello world!"
Client mosqpub/922-raspberrypi sending CONNECT
Client mosqpub/922-raspberrypi received CONNACK
Client mosqpub/922-raspberrypi sending PUBLISH (d0, q0, r0, m1, 'testTopic', ... (12 bytes))
Client mosqpub/922-raspberrypi sending DISCONNECT
pi@raspberrypi:~ $
```

```
pi@raspberrypi: ~
pi@raspberrypi:~ $ mosquitto_sub -d -t testTopic
Client mosqsub/921-raspberrypi sending CONNECT
Client mosqsub/921-raspberrypi received CONNACK
Client mosqsub/921-raspberrypi sending SUBSCRIBE (Mid: 1, Topic: testTopic, QoS: 0)
Client mosqsub/921-raspberrypi received SUBACK
Subscribed (mid: 1): 0
Client mosqsub/921-raspberrypi received PUBLISH (d0, q0, r0, m0, 'testTopic', ... (12 bytes))
Hello world!
```

## Types of MQTT messages

CONNECT — Is the client request to connect to the broker

CONNACK — Acknowledgement of the connect

PUBLISH — Publishes a message to a topic

PUBACK — Acknowledgement of the publish with QoS level 1

PUBREC — Acknowledgement of the publish with QoS level 2 (2nd packet)

PUBREL — Response to the PUBREC. (3rd packet when using QoS level 2)

PUBCOMP — Response to PUBREL (4th and last packet when using QoS lvl 2)

SUBSCRIBE — Packet from the client to subscribe to topics

SUBACK — Acknowledgement of the subscribe packet

UNSUBSCRIBE — Packet from the client to unsubscribe from topics

All activities today are a part of graded in-class lab  
Download codes from github and demonstrate  
[10 points]

# Skeleton of the updated Python program written for Raspberry Pi

```
import library1 as name1  
import RPi.GPIO as GPIO  
import time
```

Import libraries that are relevant for interaction with the Raspberry Pi hardware such as GPIO pins, camera ports etc.

```
GPIO.setmode(GPIO.BOARD)
```

```
GPIO.setup(12, GPIO.OUT)
```

Set up GPIO pins as data outputs or inputs for sensors and actuators

```
def function_name(arguments):  
    statement  
    statement  
    ...  
    return value
```

Create user-defined functions to modularize your code and make it easy to work.

Create user-defined functions to release the GPIO pins

```
if __name__ == "__main__":  
    try:  
        function_name1()  
    except KeyboardInterrupt:  
        function_name2()
```

Create entry point into the program and pull all functions in

Create a keyboard-interrupt exception clause

# Light up an LED with your Raspberry Pi 4 B

Someone should summarize what we learned today
