Mike Pilone

Business Relations Manager and Former Digital Technologies Director of Factory 4.0 (Pratt & Whitney)

Mike Pilone is the Enterprise Architect for NPR Distribution and has been with NPR for 15 years, working on the ContentDepot system that was prototyped using the Raspberry Pi (Model 5) and other off-the-shelf, open-source components. Mike works with NPR's various teams to lead and coordinate the technical implementation of major projects and to inform the direction of the Interconnected System.

Abstract: NPR Distribution distributes public media content to hundreds of stations across the country using multiple transports including satellite and terrestrial internet. As many challenges have developed in the satellite space, NPR focused on designing and building the next broadcast radio distribution hardware as a custom edge device that can encode and decode ultra low-latency audio for radio producers and stations. The device leverages open source software and commodity hardware to make it reliable, affordable, and flexible to meet the demands of public radio.
